

## Benefits of the British Gas Dimplex Quantum Tariff:

- Great **day and night** electricity prices
- **Reduced night-time rates** for the whole home, from 12:30am – 7:30am daily
- Rates are **fixed for at least 12 months** once you've signed up
- **100% renewable electricity\***
- Supports the UK's efforts to increase **sustainable electricity** generation
- **Full control** of your cost and comfort through our Dimplex Control App

\* British Gas match the electricity you buy from them on this tariff with 100% renewable energy by buying Renewable Energy Guarantee of Origins certificates. This means buying certificates that guarantee electricity has been generated from a renewable source to match the electricity that you'll use.

The British Gas  
Dimplex Quantum Tariff

# The British Gas Dimplex Quantum Tariff

The award-winning British Gas and Dimplex partnership has now launched the UK's most advanced electric storage heating tariff: the British Gas Dimplex Quantum Tariff.

The British Gas Dimplex Quantum Tariff is a first-of-its-kind optimised smart tariff for your Quantum storage heaters. Created by British Gas, the tariff can offer **lower rates than typical Economy 7 tariffs** thanks to the heaters' capability to allow British Gas to charge your Quantum heater when electricity costs are lowest on the grid.

It's **100% renewable electricity\***, and with **prices fixed for at least 12 months** from when you sign up, you can enjoy peace of mind without the worry of increasing rates.

Designed, developed, and manufactured in the UK, the Quantum heaters intelligently communicate with British Gas, who charge them up with low-cost electricity when it's available on the grid. This cheap electricity is stored as heat and used when needed to maintain the selected temperature in your property.

## And the best thing is...

This is all done automatically, reducing your bills without affecting your comfort!

\* British Gas match the electricity you buy from them on this tariff with 100% renewable energy by buying Renewable Energy Guarantee of Origins certificates. This means buying certificates that guarantee electricity has been generated from a renewable source to match the electricity that you'll use.

## To access these savings, you'll need:

**Eligible Quantum heaters\*** installed as your main heating system.

**A Dimplex Control Hub** with all Quantum heaters connected.

A functioning "always on" **home broadband** internet connection.

**A smart meter upgrade** - if you have a conventional Economy 7 meter, British Gas will upgrade this to a smart meter free of charge.

\*Check your eligibility here: [dimplex.co.uk/british-gas-dimplex-quantum-tariff](https://dimplex.co.uk/british-gas-dimplex-quantum-tariff)

You can register for the tariff by calling **0333 202 9756**.

### What is a Dimplex Control Hub?

The Dimplex Control Hub is a device that connects your Quantum heaters to the internet. With the Dimplex Hub connected to your home broadband router, you can use the app to view your energy use, adjust your heating settings, and control your system from anywhere in the world.

This is also the connection that makes it possible to see when you have space to store cheap electricity, allowing British Gas to charge your heaters and save you money.

### What is a smart meter?

When a meter is called 'smart', it simply means that unlike old electricity meters, it's capable of recording how much energy was used at a particular time of the day. This allows us to see when cheap electricity is passed from the grid into your heaters.

**British Gas can arrange for a smart meter to be fitted free of charge as they're being rolled out across the country. In fact, more than 55% of homes in the UK already have one installed.**

For the latest tariff information follow this QR code, or call **0333 202 9756**.

If possible, find your energy bill before calling – having your annual usage will help us to see how much you could save.
